To: Federal Communications Commission
Re: FCC Proceedings 25-133 – Public Input on Deregulatory Initiatives
From: World Council for Health and Affiliated Partners

Dear FCC Members,

We, the undersigned representatives of the World Council for Health (WCH) and its international partners, write to express our deep concern regarding the potential deregulation of existing FCC rules under the current proceeding. While we recognize the importance of innovation and economic growth, we urge the Commission to ensure that public health, ecological well-being, and the fundamental rights of individuals remain paramount in any regulatory review process.

About the World Council for Health

The World Council for Health is an international coalition comprising more than 250 health-focused organizations across 55 countries. Our initiative advocates for ethical, evidence-based healthcare and environmental policies, personal sovereignty, and transparency in governance. With over 30 active and autonomous international councils, including WCH Florida, and WCH New England, in formation, our grassroots-driven network empowers communities worldwide to make informed decisions and demand accountability from governing institutions. We also advise on legal actions and international policy. To this end we have recently submitted information and advice to the Trump Administration on WCH Collaboration Centers in the U.S.

Safeguards Are Not Burdens — They Are Protections

We respectfully highlight that existing rules and regulations are not inherently burdensome. In fact, they serve a vital role in protecting the American people, and all global citizens, from potential health and environmental harms. As technology evolves rapidly, it is even more critical that regulatory frameworks evolve *responsibly*, not regressively.

Relaxing protections in favor of fast-tracked technological deployment may result in **a greater burden**: the burden of disease, environmental degradation, and long-term systemic costs to healthcare and infrastructure. These burdens will not be borne by corporations—but by people, families, and future generations.

The World Council for Health supports the advancement of technology, but only when it is guided by **discernment**, **transparency**, and **informed consent**. Public exposure to untested or insufficiently studied electromagnetic radiation, like 5G/6G for example, cannot be treated lightly. Satellite-based and terrestrial wireless technologies have *global* impacts that reach far beyond U.S. borders. No global population has consented to the sweeping expansion of these technologies. The FCC must recognize that this issue is inherently international, and requires a precautionary, not permissive, approach.

We formally notify the FCC, on behalf of our partners and international communities, that **we do not consent** to the further escalation and deregulation of technologies that carry unresolved risks to health, biodiversity, and planetary stability.

Recommendations and Supporting Evidence

We urge the Commission to:

- **Strengthen current safeguards** that protect public health and the environment.
- **Refrain from prioritizing competition and business interests** over the fundamental well-being of people and ecosystems.
- **Ensure informed consent** is a guiding principle in all technology deployment decisions.
- **Review independent scientific literature** on the biological impacts of wireless radiation, including the WCH Policy Brief on the *Effects of Digitalization on Health and Democracy*, as well as the 2025 *Firstenberg Brief on Electrosmog*.

In conclusion, we urge the FCC and the Trump Administration to embrace a regulatory framework that reflects not only economic ambitions but also **ethical responsibility, scientific integrity, and human rights**. Rules are not obstacles to progress, they are the foundation of a society that values its people.

To be clear, we do not consent to de-regulation.

Sincerely,

Dr Tess Lawrie
WCH Team Coordinator

Christof Plothe DO
WCH Health & Science Coordinator

Shabnam Palesa Mohamed
WCH Law & Activism Coordinator

Dr Mark Trozzi
WCH Canada Coordinator
